

THE CHINOOK ADVANCE

Vol. 22

Chinook, Alberta, Thursday, July 20th 1944

TIME BOMBS

Nations unite under great deprivation. An even higher achievement would be to unite for great opportunity — and because we choose to do so, not because we have to.

A man is great only when he feels as deeply and acts as courageously as he thinks.

Morale — The spirit that keeps you eager to do what's right.

The leader is not he who commands many followers but he who can inspire many to accept the bair of Leadership themselves

Men sometimes go up the ladder of success with no corresponding growth in mind or morals.

Let the Lord make you over into a self-starter

The Management of The Chinook Picture Show

The management of the Chinook picture show wishes to thank its patrons, who make it possible to have these shows. We feel that we are most fortunate in having this entertainment brought within the reach of all in the Chinook district, however in order that we can continue this service for you we must ask your fuller co-operation by attending these shows regularly.

Mr. Miller has gone to a great deal of trouble and expense to give you the best quality of entertainment and the only way you can repay him for this is by your continued and whole hearted patronage.

SEEDTIME and HARVEST

By Dr. K. W. Neale
Director, Agricultural Department
North-West Line Elevators Association

Autumn-Sown Grasses and Legumes
There are, no doubt, large areas in the prairie provinces which will be devoted to straight grain farming for many years to come. In most districts, however, a reasonable acreage of grass, or grass and alfalfa mixed, is good for the farmer and good for the farm.

A great many farmers have been discouraged because attempts to "get a catch" of grass have failed. Failure is commonly due to (a) sowing too deeply, (b) no protection from soil drifting and (c) sowing at the wrong time. In some years and some districts, the use of nurse crops has also caused disappointment.

Since the autumn is, also, not very far away, and since autumn-sowing of grasses is becoming more and more popular, we think it wise to draw attention to some experimental work done at Saskatoon and published in "Scientific Agriculture" (Vol. 23, No. 7). The following statements are derived from this publication and the authors are Dr. W. J. White and Mr. W. H. Horner.

1. Sweet clover should not be sown in autumn.
2. Crested wheat grass, bromegrass, slender wheat grass and alfalfa may be sown in autumn if—
(a) Sowing is early enough to establish good-sized seedlings (late August to early September), or
(b) Just before freeze-up, so that seeds don't germinate until spring.

3. Better results are obtained by sowing in stubble or weeds than on bare summerfallow.
Since conditions vary from place to place, it is wise to consult the nearest experimental farm or the local agricultural representative.

Expansion In India

THE PEOPLE OF CANADA have been well informed during the past four years, regarding this country's expansion as a military and naval power, and regarding the industrial development which has taken place here. We have likewise been aware of what has been done in Australia and New Zealand, through visits of their statesmen to this country, through the press, and through the presence of many thousands of their young men who have come here for air training. Attention has also been directed frequently to the activities of the people of the Union of South Africa, and to the addresses of their veteran statesman and prime minister, General Jan Christian Smuts. India, a large and important member of the Empire has also expanded during these critical times, but many details of her development are not generally known.

Tradition Once A Strong Force

Tradition, once a strong force in the life of India, has given away to much broader views on many subjects. As applied to the army, this change has brought about some important and interesting developments. At the outbreak of war, in 1939, the Indian army consisted of only 122,000 men, and 3,000 officers. The Indian troops were all men belonging to groups with fighting traditions, including Rajputs, Sikhs, and Punjabs. There was also an army of ten Gurkha regiments, supplied by the independent kingdom of Nepal. All Indian forces were for the purpose of home defense. By 1944, however, India's army consisted of 2,000,000 men, recruits having averaged 50,000 a month for over three years. In the same period, the number of officers had risen from 3,000 to over 100,000. The new fighting tradition, and 500,000 have served overseas. These were noted for their courage and gallantry, and up to the beginning of 1944, four members of the Indian forces have been awarded the Victoria Cross.

Work Of Royal Indian Navy

The new Indian army includes artillery, engineers, signal corps, motor transport, ordnance, medical corps, and supply units. Training facilities have been greatly expanded, and these have included new training camps for tank men, and paratroops for jungle fighting. There is also an active Women's Army Auxiliary Corps. The Royal Indian Navy increased to fifteen times its pre-war size in four years and it has not only undertaken patrolling, minesweeping and escorting merchant vessels in coastal waters, but has escorted convoys on the high seas, and has taken part in 12 landings during the Atlantic campaign. The Indian campaigns are believed that the contributions of the Indian army and navy have had considerable bearing on Allied successes in the Far East, and will without doubt, have a part in shortening the duration of hostilities in that area.

Scourge Of Enemy

How A Mosquito Bomber Bottled Up A Nazi Train

The Mosquito fighter-bomber is the scourge of enemy transport systems in the invasion. One of the most amazing exploits performed by a Mosquito is still related by the boys in the Air Force, although it happened when the Mosquito was still pretty much a mystery ship.

According to the story told in "Aeronews", workers' magazine of Central Aircraft Ltd., London, Ont., crown overhaul plant, a Mosquito 181 was hedge-hopping along an important rail line in occupied territory when he spotted a heavily laden train. At 600 feet he let go with his cannon. The engineer put on steam, speeding his train into a tunnel where he stopped and waited for the Mosquito to buzz off—or so he thought. When the pilot caught on to the engine driver's game he swung his craft over the tunnel mouth and dropped a bomb, completely sealing one end of the tunnel. That left one end open, so back the pilot went over the mountain and sealed that end, bottling up the train and its crew in as nice a cold storage room as you'd wish.

It takes a fast manoeuvrable plane to do a job like that and it takes a fast thinking, quick-acting pilot to whip his plane over tree tops and around chimneys. It's an unbeatable combination.

Got It Back

Corporal Found Brother's Watch On Captured German Officer

Cpl. Chester L. Lester captured a German officer as his infantry unit advanced along the Normandy Coast. He examined a wrist watch worn by the prisoner and noted that it was engraved "Arthur B. Lester."

Questioning revealed the officer had taken the watch from Lester's brother when he was held for a short time by the Germans during the North African campaign.

The incident was reported by Stars and Stripes, American Army newspaper.

In the course of an ordinary wash, a woman who does her laundry by hand lifts 632 pounds of clothing.

Price Control And Rationing Information

Q—I take in a number of boarders and would appreciate your advice on obtaining rationing sugar coupons.

A—Canning sugar coupons, as well as all other ration coupons attached to a ration book, belong exclusively to the person named on the ration book or card. However, every housewife who provides meals for her own family, or for boarders, will expect them to make available to her such of their coupons as are reasonably necessary. Accordingly, in the case of "B" coupons, a permanent boarder should turn all these over to his landlady to enable her to do the necessary home canning, while a boarder of less permanence should divide his coupons equitably so that his present landlady will receive a fair share, leaving to him the means of providing against his future needs.

Q—I am confused about preserves which are rationed. Will you kindly point out a list of preserves which are rationed?

A—As of July 1, 1944, preserves which are placed under rationing regulations are as follows: Jam, marmalade, marmalades, confectionery, honey butter, extracted honey, fruit jams, canned fruits, canned rhubarb, corn syrup, cane syrup, blended table syrup, maple syrup, maple sugar, maple butter, canned cranapples, blueberries and blueberry pie-filler.

Preserves not rationed are: Pine-apple pulp in 105-oz. containers or larger; apple butter, apple pie filler in 105-oz. containers, or larger; Sorghum syrup, sorghum molasses, blackstrap molasses sold in bulk or sealed containers over 120 fluid oz., marshmallow cherries, canned fruit juices, canned cranberry sauce (after August 31 canned cranberry sauce is placed again on the ration list).

Q—Has the Wartime Prices and Trade Board passed a regulation controlling the labelling of footware? A—Yes. After June 20, 1944, all footwear made in Canada must carry a label with the name of the manufacturer or his Wartime Prices and Trade Board license number. This order was passed to safeguard the buying public against degradation of quality.

Please send your questions or your request for the pamphlet "Consumers' News" or the Blue Book (the book in which you keep track of your ceiling prices) mentioning the name of this paper to the nearest Wartime Prices and Trade Board office in your province.

The electron, smallest unit of matter, first was identified in 1857 by an Irishman, C. J. Stoney.

Fruits And Vegetables

Contain Maximum Amounts Of Vitamin C When They Are Fresh

Five large strawberries served on the morning cereal will supply more Vitamin C than a medium orange, and half a cup of green beans will make a bigger contribution than a four ounce glass of tomato juice, according to figures released by the Nutrition Division of the Department of Pensions and National Health.

Fruits and vegetables contain maximum amounts of vitamin C when they are garden fresh. At this time of year emphasis shifts from the winter sources of vitamin C . . . citrus fruits, tomatoes, potatoes, turnips, etc., to such seasonal delights as currants, (black and red), strawberry, green beans and cauliflower. Canteloupe is as good as cabbage and a serving of raspberries a better source of vitamin C. A dish of garden peas outranks a potato . . . and not just from the point of view of the epicure.

We can feast on the good things of summer, say the nutritionists, and know that we are getting health-giving vitamins in abundance.

Price Is High

People Who Want Liberty Have To Make Many Sacrifices

Speaking in Washington Cathedral in April, the Archbishop of York emphasized the price of liberty. "Among our two peoples there has always been a great desire to drink deeply from the cup of liberty," he said. "And we want liberty, not only for ourselves, but for all, so that unarmed men and women and smaller nations and peoples may be able to use fully the gifts and talents with which God has endowed them. But freedom can only be obtained by sacrifice. Those who wish to enjoy it must be ready to pay a price for it, and the price usually is very high. It is gained only at the cost of pain, of sweat, of suffering, and of blood; it is retained only by eternal vigilance; it is lost unless men are willing to hold it even through jeopardy to their own lives."

PROTECTS ITSELF

The Rock of Gibraltar produces its own smoke screen. It deflects warm air, causing it to rise to higher levels, where it cools and forms clouds. A curious cloud formation known as "the plume," hangs over "The Rock" much of the time.

Famous Sister Ships In Invasion Fleet

Photos show the PRINCE DAVID (top), the PRINCE ROBERT (centre), and the PRINCE HENRY (bottom) photographed before her conversion for war service

Three Canadian ships in the armada carrying Allied troops to breach Hitler's Atlantic wall were originally designed for holiday traffic with no thought of grim business on the Normandy Coast. The Prince Henry, Prince David and Prince Robert were built for the Canadian National Steamships at Birkenhead, England. In the Pacific Coast service and in Atlantic waters each of these three sister ships covered great distances and carried many holiday travellers until 1939 when taken over by the Royal Canadian Navy. The H.M.C.S. Prince Robert became an anti-aircraft cruiser while the other two were redesigned as combined operations cruisers.

Press despatches from the front reported that the Prince Henry was one of the first ships to land troops in France while the Prince David also launched her landing craft in the early stages of the attack, and the Prince Robert was an important unit of the protective fleet.

While Canadian National Steamships officers had no thought of war

when specifying the type of ship required, they did ask for power and speed and thus, unknowingly, provided the basis for useful cruisers. The builders installed high pressure boilers feeding steam turbines to develop 16,000 horsepower and a top speed of 23 knots. The purpose was to maintain an exciting schedule.

The Prince ships were designed for 334 first cabin passengers with deck space for 1,500 day passengers. When launched these ships were each of 6,000 tons. In war dress their top decks, which carried much of the cabin accommodation, were dismantled.

H.M.C.S. Prince Robert has been more frequently in the news than her Canadian National sisters, early capturing a rich prize in the Pacific, and afterwards staging a fierce battle against enemy aircraft while guarding a convoy in the Atlantic. These ships sailed to the Land of the Midnight Sun but no Alaskan adventure imagined by Jack London, Robert Service or Rex Beach approached that recent action off the Coast of Normandy.

Not just for breakfast—but for every meal

These days Kellogg's cereals are more important in our Canadian diet than ever before. They're easy to digest, appetizing, *anytime!* A satisfying main dish for breakfast, a welcome change for lunch, between-meal snacks. Add flavour to left-overs too!

Here a CWAC There a CWAC

DRESS—

When the designer of the peak khaki cap worn by girls of the Canadian Women's Army Corps created the G. headgear, it was styled in such a manner that a strip around the cap could be converted and pulled down over the ears in cold weather. However, CWACs stationed in Fort Osborne Barracks, Winnipeg, have discovered a dual purpose for the lugs on their caps. They are used to protect eardrums during visiting rains. Now the ear protectors are as practical in high mercury temperatures as they are in sub-zero weather, and CWACs can be seen swishing from building to building clad in their light summer trench coats and their ears covered over.

MEETING—

A dramatic meeting took place somewhere in Italy recently, when Pte. Elmer Hendry of Windsor, Ont., one of the star attractions of the Canadian Army Show, met her brother, Cpl. John Hendry, who is serving with an Ontario Regiment. The meeting took place by chance along an Italian roadside, and John spent a four-day leave travelling with the show. Pte. Hendry is one of the first four CWACs to go to Italy.

FASHION—

Although Miss Canada in Khaki is restricted as to fashion crazes and whims regarding dress, she manages to find a pushy feminine outlet in jewelry fads, and still remain well in the bounds of dress regulations. A smart jewelry note that should soon gain a following is the identification bracelet presented to Cpl. Laurie Lane of Vancouver, by her three brothers in the three services. Complete with name and number, it bears the CWAC crest surrounded by minute crests of the Army, Navy and Air Force.

DUTY—

One of the more interesting and less-talked-about tasks being undertaken by members of the Canadian Women's Army Corps is that of tank-sealing. In every active theatre of war, tanks are used, and these tanks frequently have to be landed in as much as six or eight feet of water. It is the job of a handful of Army men and women, stationed at a huge Ordnance Depot in Lougheed Pointe, Que., to see that every tank that is shipped from Canada is first rendered absolutely water-tight and rust-proof. More than 25 Corps members are now occupied at this vital work.

DOGS SERVING IN ARMY

There are 7,000 dogs serving with the British Army today. It takes 60 days to train each one, and on completing the course each animal goes to a unit with its trainer, where the duties comprise guarding aerodromes, depots, dumps, installations, power plants and secret enclosures.

The teeth of mummies indicate that ancient Egyptians did not suffer from tooth decay, probably because of their diet of coarse and fibrous foods.

SMILE AWHILE

Tourist: "Not much class to the people in this town, is there?" Native: "Class? Say, we've even got two bread lines here—one for white and one for grey."

"Water, will the orchestra play anything requested?" "Oh, yes, sir." "Well, ask 'em to play bridge."

The other day a woman burst into tears in court and told the magistrate that she had been jilted four times in the last two years. The experience had naturally unmanned her.

Mrs. Parvenue: "My husband is going to have a life size statue of himself carved in marble."

Mrs. Shoddy: "Humph! that's nothing. My husband has a bust every Saturday night."

"You want your hair parted exactly in the middle, sir?" asked the barber.

"That's what I said, didn't I?" "Then I'll have to remove one, sir. There are only five. I'll pull the middle one out."

"Another dress!" raved her husband. "Where do you think I'm going to get the money to pay for it?"

"That's your affair," replied the wife of his bosom. "I didn't marry you to give advice on financial matters."

At a local dance a sailor cut in and grabbed off a redhead for a struggle.

After a few moments she said to him: "I can't seem to remember your face, big boy, but your feet feel familiar."

The office boy was asked to ring up a number and got the wrong one.

"Mr. Woolf here," came the reply.

"Who?" replied the boy.

"Woolf," replied the wrong number.

"Well, who's afraid of you?" asked the boy.

STRANGE MALADIES

Arithomania, strange malady of the human mind, is the uncontrollable desire to count things. Among other such strange mental maladies are bataphobia, the constant fear of being hit by a falling object, ergophobia, the morbid fear or hatred of work.

Only natives of New England states are actually Yankies.

—By—
BERNICE MINARIK
McClure Newspaper Syndicate

Still wishing he could cancel his role in the night's proceedings, Dave limped toward the hotel bar. It was ten now but Karen, like any other woman, would undoubtedly be late. He seated himself on a red leather stool and placed a florist's mauve box on the polished counter. The bartender seemed intent on removing seeds from halved limes. "Are you married, Mike?" "Been married twenty years," Mike looked up at his customer, seeing a face familiar to newspaper readers, a sober owl face, the brown eyes serious behind horn-rimmed glasses, the high forehead permanently creased, the cleft chin thrust forward. This countenance, topped by crisp straw-colored hair, belonged to David Prescott, Edmonton war correspondent, home for a breathing spell after writing "I Saw It Happen". The bartender didn't recognize him. He said simply, "What'll you have?" "Mike, I'm allergic to weddings and I'm slated to appear at one. What do you prescribe?" "A bridegroom, eh?" The dour expression almost cracked into a smile. "You'd better try my special—Blood Transfusion."

"Make it two. But you got me wrong. I'm only the best man. Lyle Benson was the groom. With a weekend's leave from his Army camp, he was coming to town on the midnight train. Dave felt in his breast pocket to make sure the wedding ring was still safe. It was—with the telegram carrying his new Amalgamated Press assignment. He'd be glad to get back in harness. Danger he could take in his stride—a lame one now, he reflected wryly—but deliver him in the future from appearing at publishers' teas, from lecturing at women's clubs, and, above all, from playing nursemaid to another guy's romance!

When Karen arrived, Dave was holding a Blood Transfusion in each hand and alternately sipping them. "David!" He ignored her. "David Prescott! I have to talk to you."

To relieve distress of MONTHLY Female Weakness
Lydia E. Pinkham's Vegetable Compound is made especially for women to help relieve periodic pain with weak, nervous, tired, irritable feelings—due to functional monthly disturbances. Pinkham's Compound helps nature and that's the kind of medicine to buy! Follow local directions. Worth trying!
LYDIA E. PINKHAM'S VEGETABLE COMPOUND

"What's the rush? Open Lyle's flowers!" She fumbled with the box and seemed hesitant as she pinned the corsage of three white gardenias to her jacket lapel. "If you're ready now," she urged, "let's go out into the garden."

A full moon hung in the sky like a misplaced lamp. They sat down on a marble bench. Neither spoke. Dave surprised himself by thinking how really beautiful the girl was—tiny, blond and exquisite. She broke the silence. "David, I've done something awful."

"Yes?" "I've torn up the marriage license." "Accidentally?" "No!" He detected defiance in the tone of her voice. "Did you save the pieces?" "Yes." She pulled an envelope out of her purse and handed it to him. "Bury it?"

"Frequently a bride has diving board jitters." From his pocket he took a spoon of Scotch tape, the stuff he used for holding news copy together, and proceeded to patch up the scraps. "In case you change your mind," he told her. "I've made a date with a minister for half-past midnight. I shouldn't want to disappoint him. He lighted a cigarette, then asked: "You and Lyle have loved each other a long time, haven't you?" "Yes, but perhaps we're not the right ones for each other."

"Nuts!" "I want a real marriage—a home, children. Yet Lyle gave up a good position to volunteer for Army service."

"He's an engineer. The Government's begging for guys like him. You knew that two months ago when you and he applied for the license."

"I didn't suppose then there could ever be anybody else in the world for me, but this past week—" she hesitated.

"Yes?" "I've discovered you!" "What the heck?" he bellowed. "Talking to me as if I were—or Gable—or Casanova! But maybe I've been underestimating myself."

He drew her into his arms, and found his heart suddenly missing beats. She closed her eyes. "Was she his for the asking?" He thought of Lyle and kissed her forehead. When he released her she said, trying to be casual, "That was your rehearsal of the best man's kiss, wasn't it?"

"I'll do better after the ceremony. Weddings aren't my usual routine. I've only been to one—my own. Emily's my wife's name. I met her in London. In another week I'll be going back to her."

"Is she the American nurse whose English relatives were killed by a bomb that fell in Sussex?" "David, forgive me for being such a fool."

"All set now to plunge into the sea of matrimony?" He glanced at his wrist watch. "We'd better get going."

Lyle's train was on time. As it slowed down, he swung off a step and ran straight to Karen. He kissed her long and hard, then turned to Dave: "Isn't she a pretty bride?" Dave said: "She'll do, soldier. She'll do."

Later, when he reached into his breast pocket for the wedding ring, the telegram cracked and reminded him he would soon be China-bound by clipper. Some day, when it could no longer matter, Karen would learn that to Emily, noble but fiftyish, David Prescott had been just a case with a splintered leg, an anonymous cot in a London nursing home.

Out Of Fashion

Wearing Of Beards In The Navy Going Out Of Use

Beards, once a popular fad with Canada's sailors, are growing scarcer—and the Navy is just as glad.

A recent memorandum in this command asked seagoing captains to discourage the wearing of beards. The order stemmed from post-mortem on the sinking of H.M.C.S. Valleyfield, which disclosed that at least two of the victims might have had a better chance of survival had they not been wearing beards. Oil and salt water mixed in with their whiskers clogged them.

Another consideration has been that, in a last gamble, the enemy might resort to gas, and the Navy points out that it's difficult enough to breathe in a respirator without the stifling effects of a beard.

SERVE MEALS IN SCHOOLS

By March, 1945, 160,000 daily meals will be served in London County Council schools, an increase of 30,000. This will mean that 75% of the children attending those schools will be provided with meals. 2577

Graduates

Prefers His Jeep

Canadian Adjutant Thinks It Safer Than German Officer's Horse

Ross Munro, Canadian Press war correspondent, tells this story about Capt. Dave Brennan of Ottawa, adjutant at R.C.A.S.C. headquarters in France, who is going to stick to his trusty jeep for transportation in future and refrain from riding cap officer's horse, a splendid animal complete with saddle and bridle. He mounted and went about his beach-head business of keeping ammunition rolling forward. But on a road his steed shied at a tank and leaped a fence with Brennan still in the saddle.

Over the fence was a German minefield. He jockeyed his horse cautiously back to the road without exploding any mines, tied it to a point and went his way on foot.

The good thing about a jeep, says Brennan, is that it won't jump fences.

Standard Design

Canadian National Type Adopted For All Canadian Hospital Cars

Advice has been received from Ottawa that the design of the fourth Canadian National hospital car, which was recently placed in service, has been adopted as standard for all future Canadian hospital cars, it was announced at headquarters of the Canadian National Railways, Montreal.

Two additional air-conditioned hospital cars of the standard type are to be built in the Montreal shops of the National system, the announcement stated. The interior layout of the fourth C.N.R. car was designed by Col. E. L. Stone, Ottawa, medical adviser in the Directorate of Movements, in co-operation with medical and car experts of the National system.

The people of Manipur, India, do not eat meat.

Professional Beggars

"Four of a Kind" in Jasper National Park, Alberta, Canada.

During the summer of 1943 a black bear in Jasper National Park, Alta., had four cubs, three brown and one black. Such an unusual occurrence created quite an attraction, not only for visitors but also for the residents of Jasper. As soon as the cubs were big enough to come to town the mother bear proudly paraded them through the streets and down to the railway station, where travellers passing through Jasper could also see them. The cubs quickly became accustomed to humans who fed them countless chocolate bars, biscuits and other tidbits. Hundreds of feet of film were exposed showing the public feeding and petting the cubs and sometimes children rolling on the grass with them.

Controlling Mosquitoes

Mixture Is Found To Be Effective As A Repellent

A large number of repellent materials have been tested in the field during the past few years by the Divisions of Entomology and Plant Inspection, Dominion Department of Agriculture, in co-operation with British and United States investigators developing materials for military use. The most outstanding of the repellents tested is one known by the code name of Rutgers 612, which was developed as a result of research carried out under a Fellowship at Rutgers University. Two other excellent chemicals are dimethyl phthalate and Indalone. These three materials are being used alone and in various compounds both liquids and creams by the British and United States armed forces, to obtain a measure of protection against blood-sucking and disease-bearing insects especially in tropical and sub-tropical regions. The demand for these materials in this connection is so great that little or none is at present available for civilian use.

A formula that found favour, especially among forest workers before the war, involved the use of pyrethrum extract. Unfortunately, the available supply of pyrethrum is all required for military purposes as it is an essential ingredient in the manufacture of sprays and aerosols in controlling mosquitoes and similar pests which affect the armed forces on active service.

In view of these facts it is necessary for civilians to make do with less effective but better known repellent mixtures of the pre-war variety. Tests carried out by the Dominion Division of Entomology showed that one of the best of these for protection against mosquitoes and black flies has the following formula:

Oil of citronella 3 oz.
Spirits of Camphor . . 1 oz.
Oil of tar 1 oz.
Castor oil or peanut oil 4 oz.

This mixture was found to be equally effective as the one containing pyrethrum extract. To obtain the best results it is necessary to completely cover all exposed parts of the body.

Gliders In India

Gurkhas Were Suspicious Of A Plane Without A Motor

The gliders used by the Air Force to take in the first wave of the British airborne invasion of Burma were something new for India's Gurkhas, the tough fighting men who went along on the expedition.

Col. John Allison, one of the organizers and commanders of the American Air Force that flew the troops in, tells this story:

"The British practiced loading and unloading (the gliders) over and over."

"One of a detachment of Gurkhas told a British Officer: 'We aren't afraid to go; we aren't afraid to fight, but we thought we ought to tell you—that machine doesn't have any motor.'—Empire Digest."

Scientists estimate temperature of the centre of the sun at 25,700,000 degrees centigrade.

Canada's Standard Smoke

Cigarette Fund

From A Talk Given At A Meeting In June Of The Kinloch Club, Winnipeg

Recently returned from four overseas, Mr. Gundry was Comptroller of the Y.M.C.A. and personally looked after the distribution of cigarettes for the Overseas League Tobacco Fund.

Cigarettes leaving this country are handed under bond to avoid duty. They are sent principally in lots of 10,000. On arriving at dock they are taken to a large depot in London and great care is taken in their distribution, such as avoiding duplications and seeing that all share equally.

It requires three three-ton trucks to carry enough cigarettes for one division, and there is no doubt as to the value of these cigarettes, especially of being able to supply these and matches to those going to or returning from the fronts.

The leakage now is very small. Great care being taken to try and deliver 100% to the men.

As yet there are no canteens set up in Normandy so therefore all the cigarettes must be sent from the central depot in London, 75% of the total cigarettes come from the Overseas League Tobacco Fund.

Mr. Gundry stressed that there can be no overlapping as the need is greater than the supply, and were as necessary as a meal and letters from home.

He spoke of the immeasurable benefit of the cards which are enclosed with each packet sent by the Overseas League, with the donors' names on them. He said when the men returned from operations on the front line they were wet, cold, tired and nerves all to pieces, a cup of hot tea was given to them and when handed a packet of cigarettes with a card with some one's name from their home town the effect was almost magical. Their thoughts were directed into a different channel and they knew the folks back home were thinking of them and their comforts. He concluded his talk by saying, "Whatever you do people on the home front keep the supply of cigarettes going over continuously and the cards with the folks' names on them. They are not letting you down, so do let them down!"

Factory Made Homes

New Type Of Dwelling Is Being Tried Out In Yorkshire

A contracting and prefabricating organization in Hull, Yorkshire, which has throughout the war suffered continual and heavy bombing, has constructed two factory produced dwellings of a new type in record time. One is a three bedroom, two-story house which is entirely factory built in wooden-framed concrete wall units and was assembled on the site in four days. The other is a cottage comprising living room, bedroom, kitchenette and bathroom which was set up in six hours while the public watched its construction. The work was done by eight men and four girls. The walls, floor, chimney and roof were in position in one hour. All timber and joinery used is kiln-dried. The walls have the same heat-insulating value as an eleven-inch cavity wall. The internal fittings are calculated to make housework easier and there is a utility room in the two-story house which houses a washing boiler and has room for a pram and a bicycle. The construction of the two-story house works out at \$3,000.

Again In Fashion

British Men Not In Uniform Are Wearing Derby Hat

The "Bowler" hat, or "derby", prevalent in London for years and years, was going out of fashion before the war. Now the few people in Britain not in uniform, have taken to it again. The "bowler" was originally made by a Mr. Bowler, but was William Coke, from the county of Norfolk, who produced it on a large scale and introduced it to the world of fashion.

The singing memnon was a statue in Egypt, which gave out refrain notes when the sun rose and set. After the statue was tipped over, it no longer sang.

Had To Have A Paper

Radio Can Never Become A Substitute For a Newspaper

People who talk loosely about radio and television, etc., being likely to displace newspapers should read a despatch that came from Cherbourg. This:

"The first newspaper to be printed in liberated France rolled off the press yesterday and news-hungry Frenchmen tumbled in the street outside the hastily repaired printing plant for the first copies."

These Cherbourg Frenchmen were well supplied with radio. The BBC, the Vichy radio. That didn't satisfy them. They could listen to all the war communique and to all the "commentators", but still they were hungry for a newspaper; something in print they could read and study—something which, heard for a moment, could not be checked or thought about because it vanished from memory.

And that precisely is why radio can never be a substitute for the newspaper; the spoken word substituted for the printed. The radio is too ephemeral, too impersonal; too much of the something that can't be checked, or audited, or talked or written back to. It is, at most, an auxiliary of the newspaper.—Ottawa Journal.

Obstacles To Progress

The Man Who Does A Town More Harm Than Good

The men who do a town more harm than good are those who oppose improvements; run it down to stangers; distrust public-spirited men; show no hospitality to anyone; hate to see others make money; oppose every movement that does not originate with themselves; acquire long faces when a person speaks of locating in their town; oppose every public enterprise which does not appear to personally benefit themselves.

There are some men born with the idea that it is their job to grease the axle of the world and keep it in running order, but somehow, when they depart there is not the slightest quiver nor setback in the progress of the town.—Chatham News.

This Week's Pattern

By ANNE ADAMS

Let one costume do the work of two! Pattern 4805 for play and street wear; its skirt turns the classic two-piece play suit into a dress.

Pattern 4805 comes in sizes 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42. Size 10 skirt takes 2 yds. 35-in.; sizes 14, 16 yds.

Send twenty cents (20c) in coins (stamps cannot be accepted) for this pattern. Write plainly Size, Name, Address and Style Number and send orders to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg, Man. We will acknowledge the receipt of the mails delivery of our patterns may take a few days longer than usual.

Ten per cent. of radium's use is in making luminous coatings for clock handles, gun sights and military instruments.

ITCH CHECKED
—OR MONEY BACK
For quick relief from itching caused by eczema, athlete's foot, scabies, pimples and other itching skin conditions, use ITCH CHECKED, D.D. PRESCRIPTION. Greaseless and non-staining. Soothes, cures and quickly calms intense itching. Don't suffer. Ask your druggist today for D. D. PRESCRIPTION.

INVASION MAKES MORE URGENT THE SAVING OF CIVILIAN GAS!

A Message to Canadian Motorists

THE invasion of Europe has thrown a vast and critical burden upon the petroleum resources of the United Nations.

In the first eight days of the campaign alone Allied aircraft flew 56,000 sorties. Many thousands of oil-burning warships and landing barges are shuttling ceaselessly across the Channel. Tanks, trucks, jeeps, mobile artillery, ambulances, by the thousands, are in action.

The driving power behind all this activity is petroleum — gasoline and fuels drawn from a dwindling crude oil supply. But — there is only so much oil. If existing supplies are to prove adequate, the most stringent economy of gasoline and fuel oil must be practised here at home.

Canada is able to produce only 15% of her own gas and oil needs. The remainder must be imported from the common pool of the United Nations and the bulk of this is shipped here by tankers. Critical manpower is needed to produce our gasoline and oil. Precious lives and precious ships

must be risked to deliver it to our shores.

Invasions, and the difficulties of supply and transportation are not our only problems. Right here in Canada gas and oil are needed in enormous quantities for vital war purposes. The Commonwealth Air Training Plan has consumed as much as 548,000 gallons in a single day. Canada's Navy — expanded since war began from 15 ships to 650 — consumes over 2,150,000 gallons every week. Army training, war plant operation, food production, essential trucking — all are huge consumers of gasoline and petroleum products.

Gasoline is ammunition — ammunition of which we have all too little. To waste a gallon of it is a crime against our fighting men.

Answering Your Questions about the Gasoline Shortage

How much gasoline was consumed during the 54 days of pre-invasion bombing? ... More than 200,000,000 gallons.

How much fuel oil does a battleship take in one refueling? ... Enough to heat an average house for 350 years.

How much fuel does one armoured division consume in every five miles of advance? ... 10,000 gallons.

How many gallons of petroleum products are required to supply the needs of 500,000 European invasion troops for a week? ... Over 25,000,000 gallons.

LESS CIVILIAN GAS MEANS MORE "FIGHTING GAS" FOR THE FORCES

An announcement issued by The Department of Munitions and Supply, Honorable C. D. Howe, Minister

LOCAL NEWS

Mr D. E. Bell was a visitor last week at the Calgary Stampede

Mrs J. C. Long and son Donald of Three Hills, arrived here on Sunday, to visit with her parents, Mr. and Mrs. Roberts and sister, Mrs. L. Proudfoot.
